Tremco Roofing Projects to be Recognized in Presentation at International Roofing Expo

BEACHWOOD, Ohio (February 14, 2011) – Two sustainable roofing projects from [Tremco Roofing and Building Maintenance](#) (Tremco Roofing) will be highlighted during a presentation by Dr. James L. Hoff at the upcoming International Roofing Expo in Las Vegas. The projects are the Sam Nunn Federal Center in Atlanta, Georgia, and the Dr. David Suzuki School in Windsor, Ontario.

Significant sustainable features of the Sam Nunn Federal Center include a 20,000 square foot vegetated roofing system that offsets the building footprint for managing stormwater and reducing the urban heat island effect, and minimizing construction waste by repairing the waterproofing membrane and covering it with a new, fleece-backed membrane to accommodate the roof's growing media and pavers. The Dr. David Suzuki School, an exceptionally sustainable facility and Canada's only LEED Platinum school building, includes a vegetated roof that serves as a classroom; a white, reflective Rock-It™ built-up roof from Tremco Roofing; integrated roof/wall daylighting that provides more than 75% of daytime lighting needs; roof-mounted solar panels and much more.

Dr. Hoff's presentation, "Introducing RoofPoint™: A New Measure for Environmental Innovation in Roofing" will be held from 7:45-9:15 on Thursday, February 17. The Center for Environmental Innovation in Roofing developed RoofPoint, the only guideline and rating program specifically for sustainable commercial roofs, to help building owners effectively manage their roofing assets. RoofPoint provides a comprehensive roadmap for the design, installation and management of commercial roofing systems to maximize energy efficiency while minimizing environmental impact. Dr. Hoff's presentation will review the key features and benefits of RoofPoint and the opportunity it offers to the roofing industry.
