

LEAD WITH SAFETY

FALL PROTECTION IS JOB #1

FOUR FEET

It doesn't sound very high, but that's the height above a lower level at which OSHA requires building owners to provide fall protection under its General Industry regulations.

Why? Because a fall from a height of just four feet generates a force of impact of 1,600 lbs. in .5 seconds. It comes as no surprise, then, that the leading cause of construction deaths was falls from rooftops. And yet again in 2018 the number one OSHA violation was for roof fall protection.

The truth is, what you don't know about OSHA's Fall Protection regulations – which keep growing stricter – can cost someone their life, and potentially hundreds of thousands of dollars in direct and indirect costs.

DO YOUR ROOFS MEET SAFETY REQUIREMENTS? PLAN. PROVIDE. TRAIN.

If you're like most building owners, you may not be entirely sure about current safety requirements, especially as OSHA regulations continue to evolve. Today, OSHA requires building owners to protect people from falls while accessing exterior facility levels, traversing across roof areas where there are openings, encountering hazards or exposed edges, and working on rooftop equipment located adjacent to the roof edge.

And because prevention is the best approach to fall protection, OSHA recommends building owners follow these three steps toward the development of a rooftop safety program:

- 1 CREATE A PLAN** according to your various roofs and corresponding OSHA standards.
- 2 PROVIDE** the right safety equipment for each roof level.
- 3 TRAIN EMPLOYEES** to ensure they understand how to use the equipment and recognize hazards.

TURNKEY FALL PROTECTION FROM TREMCO ROOFING

Building owners cannot afford not to make safety your number one concern. At Tremco Roofing and Building Maintenance, safety is our top priority. We are so committed to industry safety that we have expanded our capabilities to offer essential rooftop safety solutions to our customers.

Starting with an on-site rooftop safety evaluation, our expert sales representatives offer turnkey safety solutions to bring your rooftops up to OSHA standards. From structural deficiencies and unprotected roof edges and hatches, to walkways and skylights, we will evaluate your rooftop environments according to OSHA standards and recommend system solutions.

TREMCO ROOFING SAFETY SYSTEMS INCLUDE:

- Guardrails
- Skylight Guards
- Hatch Guards
- Weighted Fall Protection Systems
- Warning Lines
- Walkway Systems
- Crossovers
- Ladders
- And More

Now YOU can lead with Safety. Contact your Tremco Roofing sales representative today for a free rooftop safety evaluation.
