

# Efficient Contractor Selection with Compliance Assured through **QCsolver**

The success of any construction project depends on the qualifications and capabilities of the contractor you choose. Through **QCsolver**, Tremco Roofing and Building Maintenance now offers a way to evaluate the qualifications of Canadian contractors quickly and transparently for your next roofing and building envelope project.

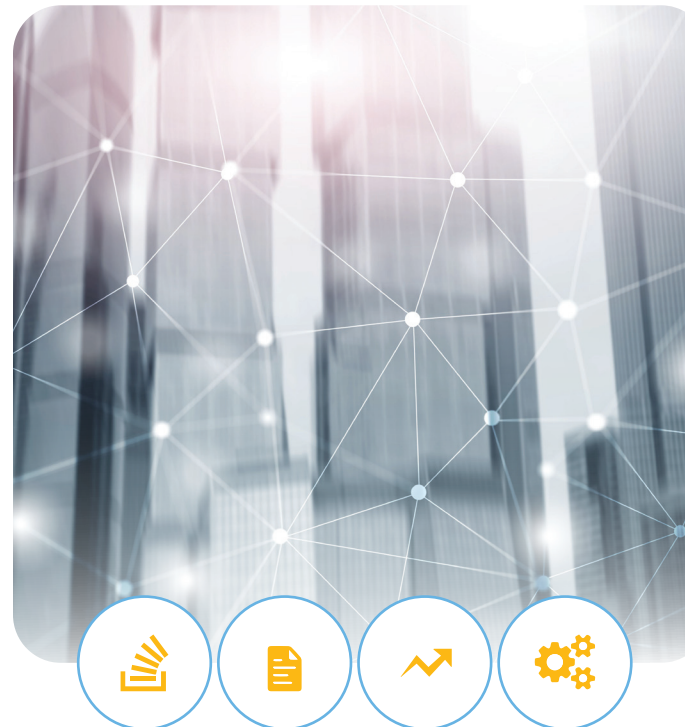

**What is QCsolver?** QCsolver is a cloud-based software that Tremco uses to manage the qualifications and compliance of its contractors in Canada. It is a repository for the documentation needed for submittals, housed in one place, and reviewed by an independent third party. Through QCsolver, public entities can see immediately if their chosen contractor is compliant with the submittal process. It also provides a tangible record of the due diligence necessary to engage a qualified contractor.

## How does it work?

QCsolver invites contractors to create a profile, input information specified by Tremco for the submittal process and provide supporting documentation in the following categories:

- Licenses, certifications, and credentials
- Insurance requirements
- Workers' compensation
- Health and Safety policies
- HST verification
- Work references
- Contact information

The QCsolver team ensures that all requested information is complete and up to date. At the touch of a button, you can conduct the due diligence necessary to confidently choose your contractor. Your local Tremco field advisor can provide a QCsolver login to review available contractors. There is no cost for this access.

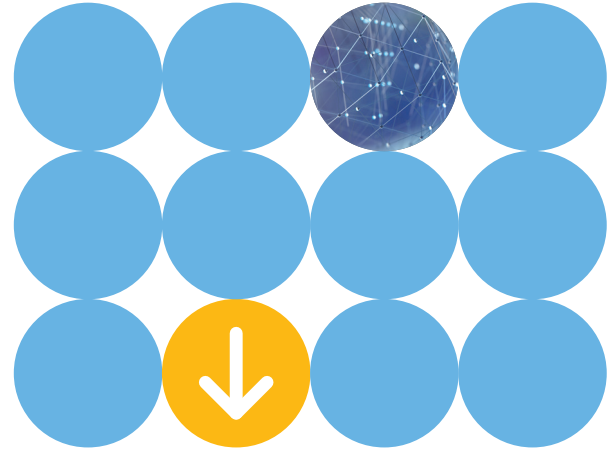

To learn more about using **QCsolver**, please:
