Consult Tremco/Fibergrate Technical for corrosion recommendations at concentrations, temperatures or chemicals not listed in this guide. MAX TEMP is 180° for Pultruded VEFR; 150° for Corvex and Pultruded ISOFR. The information in this Corrosion Guide is correct to the best of our knowledge. It is based on extensive experience with FRP in corrosive applications. Because actual use conditions differ and mixtures of corrosives will occur in service, the end user must test for use under actual conditions. Tremco/Fibergrate's responsibility for claims arising from breach of warranty, negligence or otherwise is limited to the purchase price of the material sold by Tremco/Fibergrate. Test coupons are available upon specific request.
